

EXCAVATOR OPERATOR JOB DESCRIPTION

An excavator operator works at a construction or excavation site, working on the excavator equipment. The job of an excavator operator can be extremely demanding in some cases, due to the sensitive nature of the otherwise heavy-duty machines that the excavators are, and excavators can commonly be seen working alongside other people who assist them in their primary duty. An excavator may sometimes be required to perform mechanical work on the machines under their supervision, for example performing repairs, check-ups and seeking replacement parts when they're needed. In larger operations, these duties are commonly performed by specialized mechanics.

All Bergeron employees will fulfill the duties of their own position and any other tasks within their abilities as assigned by the Superintendent.
